

Wireless charging to AGV battery

Conventional problems

- The battery has to be removed for recharging.
- The time to charge next want to be extend.

Kaizen ! **Remote system**

Improvements

- Battery replacement work is not necessary.
- Since it recharges at the stop point, AGV can be operated efficiently.
- Conducting parts are not exposed and safety for worker is secured.

Innovation

It is possible to recharge the battery while standby time at the stop position during the operation.
