

Trajectory detection of AGV(Automatic Guided Vehicle) 5.8.10bit system

Advantages

- ◆ Can travel on complicated routes
Read the written data to the ID tag and AGV travels according to written data, it is also possible to travel on a complicated route depending on the program.
- ◆ Easy to change traveling path
Data of ID tag can easily be rewritten depending on the applications. You need less maintenance items
- ◆ Protection class
Due to high waterproof / dustproof structure, it can be used in places where water is applied or where there is dust.
- ◆ Free route design
It is smaller than the magnetic tape, so the turning angle of the AGV is small.

Install an ID tag on the traveling line of the AGV that has been programmed in advance. AGV travels according to the program by reading data wirelessly from the ID tag.
