

Workpiece confirmation on pallets

Previous problems

- Countless disconnect and connection causes need for frequent maintenances. Designated area and time needed for connection and disconnection of pallets.

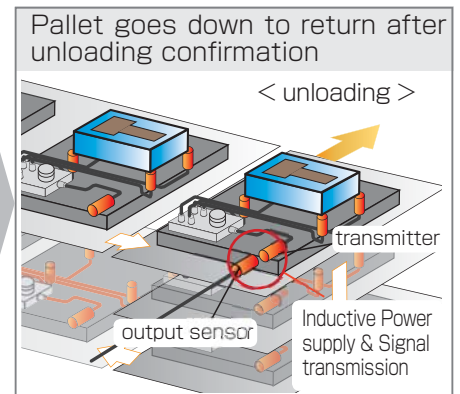

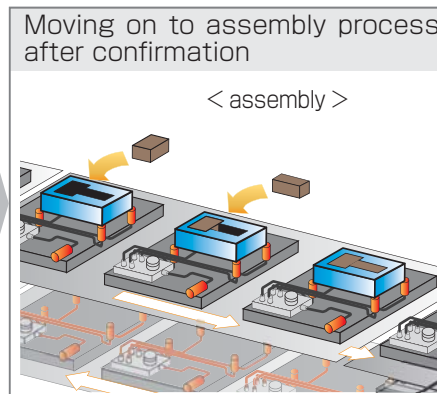

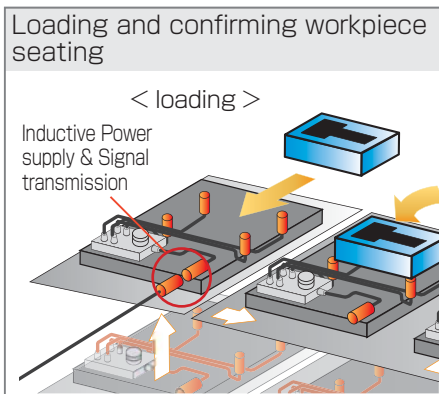

After improvement

- Eliminating connectors simplified the process.
- Eliminated waiting time for connection and disconnection.
- Pallets can be used efficiently.

Application

Confirming workpiece on circulating pallets through assembly process.
Remote system sends power to proximity switches and transmits their signals.

Construction of devices
